## Screening Test/Interview Questions for System Administrator (Remote) Position

**Instructions:** Please precede all your answers with the question you are answering.  
Use acronyms only after you've explained them.  
Use correct spelling and grammar.

### ***Candidate's Name:***

1. What inspired you to pursue a career in system administration, and how has it shaped your technical approach?
2. How do you ensure the stability, security, and performance of IT systems and servers?
3. What strategies do you use to troubleshoot and resolve system-related issues efficiently?
4. How do you monitor system performance and identify potential risks before they become major problems?
5. Can you describe a time when you resolved a critical system outage or infrastructure issue?
6. What experience do you have managing servers, operating systems, or virtualization environments?
7. How do you prioritize and manage multiple system administration tasks or incidents simultaneously?
8. How do you approach system backups, disaster recovery, and business continuity planning?
9. What role do you play in maintaining system security and access controls?
10. What tools, platforms, or technologies are you most experienced with as a system administrator?
11. How do you collaborate with network engineers, developers, or help desk teams?
12. Can you share an example of a system improvement or automation you implemented?
13. How do you stay updated on emerging technologies, security threats, and best practices?
14. What experience do you have with cloud infrastructure or hybrid environments?
15. What do you think is the key to being an effective and reliable system administrator?

## **Role Overview**

We are seeking a skilled and proactive Remote System Administrator to manage, maintain, and support our IT infrastructure and systems. The ideal candidate will ensure system reliability, security, and performance while providing technical support and troubleshooting assistance in a remote work environment.

## **Responsibilities:**

- Install, configure, and maintain servers, operating systems, and network infrastructure
- Monitor system performance and ensure high availability and reliability
- Troubleshoot hardware, software, and network issues
- Manage user accounts, permissions, and system access controls
- Perform system updates, patches, backups, and disaster recovery procedures
- Implement and maintain security measures to protect systems and data
- Support remote employees with technical issues and system access
- Maintain accurate system documentation and inventory records
- Collaborate with IT teams and vendors on infrastructure improvements

## **Qualifications:**

- Proven experience as a System Administrator or similar IT role
- Strong knowledge of Windows, Linux, or macOS server environments
- Experience with virtualization technologies (VMware, Hyper-V, etc.)
- Familiarity with networking concepts, firewalls, VPNs, and security protocols
- Knowledge of cloud platforms such as AWS, Azure, or Google Cloud
- Strong troubleshooting and problem-solving skills
- Excellent communication and organizational abilities
- Ability to work independently in a remote environment
- Reliable high-speed internet connection and secure workspace

## **Benefits:**

- 100% Remote Work
- PTO
- Health Insurance
- Dental Insurance
- Vision Insurance
- Life Insurance
- 401(k)
- Paid Parental Leave

***Salary ranges from \$125,000 - \$135,000 yearly***
